Picture and detailed description of the test sample

Test Report No. Q00224110-1R1
 Customer LIEN SHENG PLASTIC INDUSTRY CO.,LTD

1. Biodegradation

1.1 General test information

Reference material: Cellulose

Test vessels: 2000ml, the vessel used for biodegradation test is a high pressure conical flask, volume: 2000 ml. It was provided by Pyrex Co. Ltd.

CO₂-determination: Determination of the amount of carbon dioxide evolved by weighing the carbon dioxide absorbing system. The amount of carbon dioxide is calculated via the difference in the weight of the carbon dioxide absorbing trap in the beginning and in the end of the test.

Thermostat controlled oven: The biodegradation test is proceeded in a temperature controlled oven for maintaining the temperature needed.

1.2 Summary of test results

| | Test material | Reference material |
|-----------------------------|----------------------|----------------------|
| 45 days biodegradation rate | 81% | 84% |
| Overall biodegradation rate | 90% | 96% |
| Test duration | 66 days | 76 days |
| Observation | No abnormal findings | No abnormal findings |

Validity Criteria

- Degree of biodegradation of reference material after 45 days > 70% ?
 Yes No
- Difference between percentage biodegradation of reference material in the different vessels at the end of test <20% ?
 Yes No
- Average CO₂ production in the blank vessels after 10 days in the range 50mg to 150mg CO₂/g volatile solids ?
 Yes No

1.4.2 Properties of compost

Table 1 Properties of compost

| Total dry solids (%) | Moisture content (%) | Volatile solids (%) | Ash (%) | Compost Activity Test (mg - CO ₂ / g - volatile solid) | Carbon/Nitrogen ratio (%) |
|----------------------|----------------------|---------------------|---------|---|---------------------------|
| 45 | 55 | 52 | 48 | 142 | 22 |

1.4.3 Activity of the compost

Table 2 The amount of CO₂ for the first 10 days

| Days | Amount of carbon dioxide (mg) |
|-------|-------------------------------|
| 1 | 1720 |
| 2 | 2170 |
| 3 | 2250 |
| 4 | 1357 |
| 5 | 1357 |
| 6 | 1357 |
| 7 | 2920 |
| 8 | 2720 |
| 9 | 1720 |
| 10 | 2360 |
| Total | 19,950 |

$$142 = \text{mg} - \text{CO}_2 / \text{g} - \text{volatile solid}$$

1.4.4 Total Amount of Organic Carbon for Test and Reference Samples

Table 3 Total amount of organic carbon

| | Total organic carbon (%) | Amount of organic carbon (TOC) in test vessel, (g) | Theoretical amount of evolved carbon dioxide, (ThCO ₂), (g) | Size (cm × cm) | Thickness (mm) | Shape | Total dry solids (%) | Moisture content (%) |
|--------------------|--------------------------|--|---|----------------|----------------|--------|----------------------|----------------------|
| Reference material | 42.63 | 20 | 73.3 | - | - | powder | 95 | 5 |
| Test material | 17.83 | 20 | 73.3 | - | - | powder | 99 | 1 |

$(CO_2)_B$ = Measured cumulative CO₂ production by blank
 $(CO_2)_t$ = Measured cumulative CO₂ production by test or reference material
 $(CO_2)_{Bmean}$ = $[(CO_2)_{B1} + (CO_2)_{B2} + (CO_2)_{B3}] / 3$
 D = $[(CO_2)_t - (CO_2)_{Bmean}] / ThCO_2$
 D_{mean} = $(D_{t1} + D_{t2} + D_{t3}) / 3$

1.7 Additional information (observations, reasons for rejection of test results and others)

This test report proves that the sample can be degraded by microorganisms according to the EN 13432 in combination with EN 14855.. After 66 days 90% of the test material have been degraded to carbon dioxide, so the test was stopped after that time, as the requirement already was fulfilled.
